

IRIS Exchequer Warehouse Solutions

The ultimate productivity tools for your warehouse and stock management

It's a difficult time to be managing a warehouse. The pressure is on to keep costs down and inventory levels low, while maintaining the flexibility to offer next-day delivery to increasingly demanding customers.

With many stock items having a limited shelf-life and with new updated versions continually becoming available, stock waste needs to be minimised to avoid unnecessary costs.

For forward-looking commercial organisations, IRIS Exchequer Warehouse Solutions (EWS) is the mobile business and finance warehouse management solution that offers full integration with your IRIS Exchequer accounting and business system, stock workflow utilising robust, portable, touch screen handheld devices. This means that IRIS EWS delivers significant time and cost savings to organisations by monitoring all stock movements and synchronisation of data between handheld devices and your live stock inventory.

Control across the whole lifecycle

IRIS EWS enables you to control the whole lifecycle of your stock, from initial delivery to the despatch to customers. Used in conjunction with IRIS Exchequer's Stock Forecasting and Returns modules, IRIS EWS gives you a watertight process for managing your stock processes. By using handheld scanners to monitor all stock movements, IRIS EWS gives you command over the 4 main tasks in the warehouse:

- Goods In
- Goods Out
- Stock Transfer
- Stock Take

Goods In

Each morning, load your supplier purchase order data into a scanner at the Goods In dock. Every time a delivery arrives, your warehouse staff will quickly find the orders, view notes and order details, then scan the barcodes to record the items received or part received. All items checked show the staff initials and the arrival date and time. When the large orders arrive, several handhelds can be used to receive the goods.

IRIS EWS workflow manager supports a multi-process warehouse. Set up one-stage straight to bin operation, two-stage quarantine and process operation... or any number of stages. Transfer damaged or incorrect goods to a quarantine stock location, for return to supplier.

IRIS EWS shows the warehouse staff the default bin number where each item should be stored and allows this to be updated with a different location. It supports serial and batch, single and multi-bin items. Transfer the data on the handheld via IRIS EWS to IRIS Exchequer at any time during the day, so that received items can be picked for manufacturing or delivery to your customers. Then download new orders, ready for receiving them.

"IRIS has always made a concerted effort to understand the client's needs and deliver a product fit for purpose. IRIS EWS has improved accuracy and reduced man hours. IRIS provided a much needed automated solution to our stock control processes."

Noble Sleek

Goods Out

Review the outstanding sales orders from your clients and decide which can be picked for delivery. Choose your criteria for picking, based on order value, percentage of the order available for picking, stock location, customer priority, age of order or due date. Check your notes on your IRIS Exchequer system on both order and customer. Download orders selected for fulfilment into your scanners. Each scanner shows one person's orders. The Warehouse Manager tracks who processes each order, and organises the team into pickers and packers using the multi-process warehouse features of the IRIS EWS workflow manager. You can choose to print a picking list, although the scanner shows all the information you need, including where in the warehouse each item is located. IRIS EWS prints a packing list showing which carton or pallet each item has been packed in, and a delivery note.

Stock Transfer

IRIS EWS also tracks stock transfers from one bin or location in the warehouse to another, and out of the warehouse to the van, showroom or event - the flexibility is limitless. IRIS EWS provides detailed tracking of the stock adjustment, user name, time and date, so nothing gets lost in transit.

Stock Take

IRIS EWS also takes care of all stock takes. As your stock has been tracked at every stage, IRIS EWS knows the exact whereabouts and levels of stock held at all times. It couldn't be simpler. It will automatically load the information into your IRIS Exchequer system to complete the stock take process. There is no need to re-key any data so there are no data entry errors and no risk of uploading duplicate data.

Features

- User profile security
- Control over visible information
- Alternative barcodes for the same item
- Microsoft Excel import, back up and restore data
- Touch screen technology
- Durable handheld scanners
- Improved stock planning and control
- Reduced wastage
- Increased efficiency
- Inter warehouse transfers
- Support for serial and batch number tracking
- Project/Job Costing integration
